246. ZAYN.
- ZAYN + SIA. Dusk Till Dawn.

4 Quotes

1. LAO TZU.
 - “The journey of a thousand miles begins with one step.”
2. LUC TARTAR.
 - “As for me, once the doubt had entered my mind, what other choice did it leave me but to search for the truth, in all fields?” – Tartar, 2006
 - “To an uninformed observer, it may seem that there is more interest in the Navier–Stokes equation nowadays, but many who claim to be interested show such a lack of knowledge about continuum mechanics that one may wonder about such a superficial attraction. *Could one of the Clay Millennium Prizes be the reason behind this renewed interest?* Reading the text of the conjectures to be solved for winning that particular prize leaves the impression that the subject was not chosen by people interested in continuum mechanics, as the selected questions have almost no physical content.” – Tartar, 2006, Preface, p. vii
 - “One should learn to distinguish between a mathematical property of an equation and a conjecture that some property holds which one guesses from the belief that the equation corresponds to a physical problem. One should learn about which defects are already known concerning how a mathematical model describes physical reality, but one should not forget that a mathematical model which is considered obsolete from the physical point of view may still be useful for mathematical reasons. I often wonder why so many forget to mention the defects of the models that they study.” – Tartar, 2006, Preface, p. vii

- “If one had used the word “turbulence” to make the donator believe that he would be giving one million dollars away for an important realistic problem in continuum mechanics, why has attention been restricted to unrealistic domains without boundary (the whole space \mathbb{R}^3 , or a torus for periodic solutions), as if one did not know that vorticity is created at the boundary of the domain? The problems seem to have been chosen in the hope that they will be solved by specialists of harmonic analysis, and it has given the occasion to some of these specialists to help others in showing the techniques that they use, as in a recent book by Lemarié-Rieusset, 2016” – Tartar, 2006, Preface, p. viii
- “Being a mathematician interested in science, and having learnt more than most mathematicians about various aspects of mechanics and physics, one reason for teaching various courses and writing lecture notes is to help isolated researchers to learn about some aspects unknown to most mathematicians whom they could meet, or read. A consequence of this choice is then to make researchers aware that some who claim to work on problems of continuum mechanics or physics have forgotten to point out known defects of the models that they use.” – Tartar, 2006, Preface, pp. viii–ix
- “Of course, I also suffer from the same disease of not having learnt enough¹, but my hope is that by explaining what I have already understood and by showing how to analyze and criticize classical models, many will acquire my understanding and a few will go much further than I have on the path of discovery.” – Tartar, 2006, Preface, p. ix
- “I once heard my advisor, Jacques-Louis LIONS, mention that once the detailed plan of a book is made, the book is almost written, and he was certainly speaking of experience as he had already written a few books at the time. He gave me the impression that he could write directly a very reasonable text, which he gave to a secretary for typing; maybe he then gave chapters to one of his students, as he did with me for one of his books, and very few technical details had to be fixed. His philosophy seemed to be that there is no need to spend too much time polishing the text or finding the best possible statement, as the goal is to take many readers to the front of research, or to be more precise to one front of research, because in the beginning he changed topics every two or three years.” – Tartar, 2006, Preface, p. ix
- “As for myself, I have not yet written a book, and the main reason is that I am quite unable to write in advance a precise plan of what I am going to talk about, and I have never been very good at writing even in my mother tongue (French). When I write, I need to read again and again what I have already written until I find the text acceptable (and that notion of acceptability evolves with time and I am horrified by my style of twenty years ago), so this way of writing is quite inefficient, and makes writing a book prohibitively long. One solution would be not to write books, and when I go to a library I am amazed by the number of books which have been written on so many subjects, and which I have not read, because I never read much. *Why then should I add a new book?* However, I am even more amazed by the number of books which are not in the library, and although I have access to a good inter-library loan service myself, I became concerned with how difficult it is for isolated students to have access to scientific knowledge (and I do consider mathematics as part of science, of course).” – Tartar, 2006, Preface, p. ix
- “It is clear that fewer and fewer students in industrialized countries are interested in studying mathematics, for various reasons, and as a consequence more and more mathematicians are likely to come from developing countries. It will therefore be of utmost importance that developing countries should not simply become a reservoir of good students that industrialized countries would draw upon, but that these countries develop a sufficiently strong scientific environment for the benefit of their own economy and people, so that only a small proportion of the new trained generations of scientists would become interested in going to work abroad.” – Tartar, 2006, Preface, p. ix
- “I have seen the process of decolonization at work in the early 1960s, and I have witnessed the consequences of too hasty a transition, which was not to the benefit of the former colonies, and certainly the creation of a scientific tradition is not something that can be done very fast. I see the development of mathematics as a good way to start building a scientific infrastructure, and inside mathematics the fields that I have studied should play an important role, where mathematics interacts with continuum mechanics and physics.” – Tartar, 2006, Preface, pp. ix–x
- “I decided at that time to add some information that one rarely finds in courses of mathematics, something about the people who have participated in the creation of the knowledge related to the subject of the course. I had the privilege to study in Paris in the late 1960s, to have great teachers like Laurent SCHWARTZ and Jacques-Louis LIONS, and to have met many famous mathematicians. This has given me a different view of mathematics than the one that comes from reading books and articles, which I find too dry, and I have tried to give a little more life to my story by telling something about the actors; for those mathematicians whom I have met, I have used their first names in the text, and I have tried to give some simple biographical data for all people quoted in the text, in order to situate them, both in time and in space.” – Tartar, 2006, Preface, p. x

¹NQBH: i.e., imposter syndrome obviously.

- “I observe that there have been efficient schools in some areas of mathematics at some places and at some moments in time, and when I was a student in Paris in the late 1960s, Jacques-Louis LIONS had mentioned that Moscow was the only other place comparable to Paris for its concentration of mathematicians. Although the conditions might be less favorable outside important centers, I want to think that a lot of good work could be done elsewhere, and my desire is that my lecture notes may help isolated researchers participate more in the advance of scientific knowledge. A few years ago, an Italian friend, GianPietro DEL PIERO, told me that he had taught for a few months in Somalia, and he mentioned that one student had explained to him that he should not be upset if some of the students fell asleep during his lectures, because the reason was not their lack of interest in the course, but the fact that sometimes they had eaten nothing for a few days. It was by thinking about these courageous students who, despite the enormous difficulties that they encounter in their everyday life, are trying to acquire some precious knowledge about mathematics, that I devised my plan to write lecture notes and make them available to all, wishing that they could arrive freely to isolated students and researchers, working in much more difficult conditions than those having access to a good library, or in contact with good teachers. I hope that publishing this revised version will have the effect that it will reach many libraries scattered around the world, where isolated researchers have access.” – Tartar, 2006, Preface, p. xi
- “I hope that my lack of organizational skills will not bother the readers too much. I consider teaching courses like leading groups of newcomers into countries which are often unknown to them, but not unknown to me, as I have often wandered around; some members of a group who have already read about the region or have been in other expeditions with guides more organized than me might feel disoriented by my choice of places to visit, and indeed I may have forgotten to show a few interesting places, but my goal is to familiarize the readers with the subject and encourage them to acquire an open and scientific point of view, and not to write a definitive account of the subject.” – Tartar, 2006, Preface, p. xii
- “There are results which are repeated, but it is inevitable in a real course that one should often recall results which have already been mentioned. There are also results which are mentioned without proof, and sometimes they are proven later but sometimes they are not, and if no references are given, one should remember that I have been trained as a mathematician, and that my statements without proofs have indeed been proven in a mathematical sense, because if they had not I would have called them conjectures instead;² however, I am also human and my memory is not perfect and I may have made mistakes. I think that the right attitude in mathematics is to be able to explain all the statements that one makes, but in a course one has to assume that the reader already has some basic knowledge of mathematics, and some proofs of a more elementary nature are omitted. Here and there I mention a result that I have heard of, but for which I never read a proof or did not make up my own proof, and I usually say so. If many proofs are mine it does not necessarily mean that I was the first to prove the corresponding result, but that I am not aware of a prior proof, maybe because I never read much. Actually, my advisor mentioned to me that it is useful to read only the statement of a theorem and one should read the proof only if one cannot supply one.” – Tartar, 2006, Preface, pp. xii–xiii
- “My personal mathematical training has been in functional analysis and PDEs, starting at École Polytechnique, Paris, France, where I had two great teachers, Laurent SCHWARTZ and Jacques-Louis LIONS. Having studied there in order to become an engineer, but having had to change my orientation once I had been told that such a career required administrative skills (which I lack completely), I opted for doing research in mathematics with an interest in other sciences and I asked Jacques-Louis LIONS to be my advisor, and it was normal that once I had been taught enough on the mathematical side, I would apply my improved understanding to investigating questions of continuum mechanics and physics which I had heard about as a student, and to developing the new mathematical tools which are necessary for that.” – Tartar, 2006, Preface, p. xiii
- “In my lectures I also try to teach mathematicians about the defects of the models used, but I want to apologize for some of the words which I use, which may have offended some. I have a great admiration for the achievements of physicists and engineers³ during the last century, and a lot of the improvements in our lives result from their understanding, which is so different than the type of understanding that mathematicians are trained to achieve. If

²Some people like to talk of pure mathematics versus applied mathematics, but I do not think that such a distinction is accurate, as I mentioned in the introduction of an article for a conference at École Polytechnique (Palaiseau, France) in the fall of 1983, but because that introduction was cut by political censors, it is worth repeating that for what concerns different parts of mathematics there are those which I know, those which I do not know well but think that they could be useful to me, and those which I do not know well but do not see how they could be useful to me, and all this evolves with time, so I finally wonder if it is reasonable to classify mathematics as being pure or applied. I consider myself as an “applied” mathematician, although I give it a French meaning (a mathematician interested in other fields of science), opposed to a British meaning (a specialist of continuum mechanics, allowed to use an incomplete mathematical proof without having to call the result a conjecture), and in French universities, applied mathematicians in the British style are found in departments of mécanique. Probably for the reason of funding, which strangely enough is given more easily to people who pretend to do applied research, some who have studied to become mathematicians practice the art of using words which make naive people wrongly believe that they know continuum mechanics or physics, and I find this attitude potentially dangerous for the university system.

³I am not mentioning biologists and chemists because biology was not part of my studies, and although I have learnt some chemistry, I only hope to understand it in a better way once my program for understanding continuum mechanics and physics has progressed enough.

I write that something that they say does not make any sense, it is not a criticism towards physicists or engineers, who are following the rules of their profession, but it is a challenge to my fellow mathematicians that there is something there that mathematicians ought to clarify.” – Tartar, 2006, Preface, p. xiii

- “Most problems are much too academic from the point of view of continuum mechanics, because the model used by Jean LERAY is too crude to be meaningful, and the difficulties of the open questions are merely of a technical mathematical nature. Also, Jean LERAY unfortunately called turbulent the weak solutions that he was seeking, and it must be stressed that turbulence is certainly not about regularity or lack of regularity of solutions, nor about letting time go to infinity either.” – Tartar, 2006, Introduction, p. xv
- “It seems to have become my trade mark among mathematicians, that I do not want to lie about the usefulness of models when some of their defects have already been pointed out. This is obviously the way that any scientist is supposed to behave, but in explaining why I have found myself so isolated and stubborn in maintaining that behavior, I have often invoked a question of religious training.” – Tartar, 2006, Introduction, p. xvi
- “I am not good at following plans.” – Tartar, 2006, Introduction, p. xvi
- “I opted for describing the general techniques for nonlinear partial differential equations that I had developed, *homogenization*, *compensated compactness* and *H-measures*; there are obviously many important situations where they should be useful, and I found it more important to teach them than to analyze in detail some particular models for which I do not feel yet how good they are (which means that I suspect them to be quite wrong). Regularly, I was trying to explain why what I was teaching had some connection with questions about *fluids*.” – Tartar, 2006, Introduction, pp. xvi–xvii
- “It goes with my philosophy to *explain the origin of mathematical ideas* when I know about them, and as my ideas are often badly attributed, I like to mention *why and when I had introduced an idea*.” – Tartar, 2006, Introduction, p. xvii
- “I have also tried to *encourage mathematicians to learn more about continuum mechanics and physics*, listening to the specialists and then trying to put these ideas into a sound mathematical framework.” – Tartar, 2006, Introduction, p. xvii
- “The framework of functional analysis is not just a change of language, because it is crucial for understanding the point of view that I developed in the 1970s for relating what happens at a macroscopic level from the description at a microscopic/mesoscopic level, using convergences of weak type (and not just weak convergences), which is quite a different idea than the game of using ensemble averages, which destroys the physical meaning of the problems considered.]” – Tartar, 2006, Introduction, p. xvii

5 Miscellaneous

5.1 Jump Rope

1. Legacy Jump Rope.
2. Icon Freestyle Rope.
3. Rush Athletics Speed Rope – Limited Edition – Ghost White.

5.2 Laptop

1. DELL XPS 15 i7. 15.6 inches.
2. MSI KATANA GF76 11UC i7. 17.3 inches.

5.3 Software

1. Sublime Text 4
2. Sublime Merge
3. Vanilla T_EXLive 2022
